

## **THERE IS NO COMPROMISE WITH QUALITY: ECI TELECOM IS RECOGNIZED FOR BUSINESS EXCELLENCE AND QUALITY LEADERSHIP**

*ECI Telecom Receives the Diamond Mark from the Standards Institution of Israel.*

PETACH TIKVAH, ISRAEL, **NOVEMBER 21, 2011** --- ECI Telecom, a global provider of [next-generation network solutions](#), today announced that it has been awarded the [Diamond Mark](#) for 2012 by the Standards Institution of Israel (SII), Israel's official standards organization. The SII grants the Diamond Mark to companies that embody business excellence and quality leadership.

### **HIGHLIGHTS**

- ECI is one of only six organizations in Israel to receive the 2012 Diamond Mark
- The Diamond Mark is given to organizations that have at least seven quality certifications, indicating they have adopted management systems, processes and products that conform to Israeli and international standards
- ECI strives for the highest levels of quality, accountability and security, in all its activities and across its 1Net families of offerings

### **QUALITY FOR THE BENEFIT OF OUR CUSTOMERS:**

The seven certifications that qualified ECI for the award include:

- ISO 9001 for Quality Management Systems: The ISO 9001 is a general quality standard, focused on processes to meet customers' expectations and to continually improve ECI's services and solutions quality
- TL 9000 for Quality Management Systems for the Telecom Industry: The TL9000 is an extension of the ISO 9001, specifically designed for the telecom sector. It provides dedicated tools for managing and controlling quality and sets strict measurements for effective benchmarking by our customers
- OHSAS 18001 for Occupational Health and Safety Management Systems: The OHSAS 18001 ensures safer and healthier working environment and processes for safer products
- ISO 14001 for Environmental Management Systems: The ISO 14001 sets requirements for environmentally-friendly products and processes from manufacturing all the way to operation of the products and provision of services, ensuring that our activities are not harming the environment
- ISO 27001 for Information Security Management Systems: The ISO 27001 ensures better information security within the company, and between us and our customers and

suppliers. It protects confidentiality and personal information while adhering to fair and accepted transparency regulations

- BS 25999 for Business Continuity Management Systems: The BS 25999 ensures continuous business activities during an incident or disaster, protecting both ECI's and our customers' interests. It provides us with tools for operation, survival and continuous service availability in case of major disruption in day-to-day operation, through back-ups, redundancies and multiple capabilities
- SA 8000 for Social Accountability Management Systems: The SA 8000 guarantees the preservation of basic human and employee rights in our organization, by complying to human and employee international and national legislations, and protecting the reputation of our customers

In addition, ECI's qualification and design verification labs also comply with ISO 17025, which sets quality and technical requirements. The ISO 17025 certifying body is A2LA, the American Association for Laboratory Accreditation.

#### **ABOUT ECI TELECOM**

ECI Telecom (Petach Tikvah, Israel) delivers Next Generation Packet Optical and Carrier Ethernet solutions to service providers and customers with a need for mission critical networks worldwide. ECI provides efficient platforms and solutions that enable customers to rapidly deploy cost-effective, revenue-generating services. Our market leading LightSoft® network management suite enables customers to smoothly manage multilayer services and provides the foundation for SDN and Cyber security solutions. For more information, please visit [www.ecitele.com](http://www.ecitele.com).

PETACH TIKVAH, ISRAEL - NOVEMBER 4, 2014 ECI Telecom, a global provider of next-generation network solutions, announced today that its new cyber-security suite LightSec, which provides holistic protection for service providers' operational and IT networks, features technology from strategic partner Check Point Software Technologies. ECI's Native Packet Transport (NPT) stand-alone security engine runs Check Point's Next Generation Threat Prevention solution. Check Point's Next Generation Threat Prevention solution brings proven security, easy deployment and effective management by consolidating the company's award-winning Software Blades into a single, efficiently managed solution. Check Point's proven security combined with ECI's transport and networking expertise makes LightSec a cost-effective suite that can accommodate all business models without requiring any additional hardware or software. "Our Next Generation Threat Prevention solution delivers our industry-leading, multi-layered security protections via ECI's LightSec cyber-security protection suite," says Alon Kantor, vice president of business development at Check Point Software Technologies. "ECI has taken a very unique approach by implementing multiple security appliances in a virtualized way and Check Point is excited to be partnering with ECI Telecom in its security innovation." ECI Telecom, a leader in optical and packet transport solutions, has developed a new Network Function Virtualization (NFV) platform over its NPT based portfolio, as well as a standalone solution. The Distributed (D-NFV) approach replaces purpose-built equipment with a generic "white box". This enables equipment like ECI's Apollo and NPT, both furnished with generic x86 based engines, to be remotely configured to run a variety of applications. This same engine can be configured to provide SCADA deep packet inspection (DPI) in one location and encryption in a different location. ECI's holistic approach provides the appropriate security means, a central point of real time views, and control for a comprehensive unified IT/operational networks cyber security solution. "The strategic partnership between ECI and Check Point was forged upon leveraging the strengths of each company's expertise," states Yuval Illuz, General Manager, Cyber Division at ECI Telecom. "ECI has Check Point's Next Generation Threat Prevention running over ECI's NFV platform, through a series of rigorous tests, and using a wide variety of testing methodologies. Both ECI and Check Point are looking forward to meeting the rising demand for complete cyber protection within vast operational networks." The LightSec suite also includes the LightSec-V® (LightSec Viewer), which is a smart web-based threat management system for managing and visualizing all of the cyber-security solutions provided by ECI. LightSec-V provides a centralized aggregated view from ECI security solutions as well as from any additional cyber security solutions used by the client. This makes LightSec configurable to match each client's specific needs. ECI will demonstrate its new LightSec cyber security suite at European Utility Week, November 4-6 in Amsterdam.

#### **About ECI**

ECI is a global provider of ELASTIC network solutions to CSPs, utilities as well as data center operators. Along with its long-standing, industry-proven packet-optical transport, ECI offers a variety of SDN/NFV applications, end-to-end network management, a comprehensive cyber security solution, and a range of professional services. ECI's ELASTIC solutions ensure open,

future-proof, and secure communications. With ECI, customers have the luxury of choosing a network that can be tailor-made to their needs today as well as be seamlessly and cost effectively upgraded to future requirements.
