## **ECI Telecom Completes the Development of its NFV Security Solution**

The NFV Solution is part of ECI's Strategy to Provide Modern, Elastic Networks for Its Growing Customer Base

ECI Announces April/May Conference Exhibition Schedule

Petach Tikva, Israel, April 16, 2015 --- ECI Telecom, a global provider of next-generation, elastic network solutions, announced today that the company has completed the development of its new NFV cyber security solution, originally announced in late 2014. The NFV solution is designed to provide telecom networks with comprehensive cyber security services, without forklift upgrades or additional physical devices. Using an integrated server, the NFV cyber solution enables networks to easily and seamlessly activate different cyber applications. One of the applications, crafted in partnership with Check Point Software Technologies, delivers best-of-breed firewall, IPSec, SCADA FW, DPI and application control.

The NFV security solution is part of ECI's LightSec product suite, which also includes the LightSec-V® (LightSec Viewer), an aggregated web-based threat management system for managing all cyber security threats, whether detected by ECI or third party solutions. The NFV solution will be available shortly for proof of concept through ECI's cyber solutions division.

"The LightSec solution is one of the most comprehensive cyber security solutions available on the market. It is built to secure all levels of the network from layer 1 through 7, in a modular add-on architecture which works seamlessly on ECI's equipment as well as standalone platforms in multivendor environments," said Mr. Yuval Illuz, general manager of ECI's cyber solutions division. "We've had great success trialing our other cyber offerings over the past months. We are confident that the NFV solution will achieve the same results, and look forward to working in concert with select global ECI customers interested in benefiting early on from this new cyber security technology."

Mr. Illuz continued, "NFV and SDN have long been all the hype in the telecom sector, and for good reason. Telecom customers understand that change is the only constant. For this reason, telecom customers need a network that can adapt lightning fast and stay ahead of the curve. ECI's elastic network solutions are designed to do this. Gone are the days where getting more out of your network requires network migration and forklift upgrades. ECI's SmartLight™

Your Partner for Growth

framework ensures its customers not only a tailored network designed for current needs but one that is also easily and cost effectively adaptable to future business needs, with staggered, modular investment overtime.”

ECI also announced today that its cyber solutions group will demonstrate its solutions at several leading industry conferences in the coming months including: INTERPOL World 2015 in Singapore City, Singapore, booth number L1-F07, April 14-16, 2015; RSA 2015 in San Francisco, booth number S1946, April 20-24, 2015; and, CIGRE in Iguazu, Argentina, May 17-21, 2015. We invite you to visit us and to learn about how ECI can help secure your network.

### **ABOUT ECI TELECOM**

ECI Telecom delivers comprehensive networking solutions to service providers, data center operators, and mission-critical utilities around the globe. Along with industry-proven, next-generation packet-optical transport products, ECI offers a variety of solutions, including SDN/NFV applications, a comprehensive cyber security solutions and an extensive range of professional services. ECI transforms any transport network into an elastic, open, cost-effective revenue-generating system.
