

NEPTUNE NPT-1010D DIN-RAIL

MANAGED PACKET TRANSPORT EDGE DEVICE

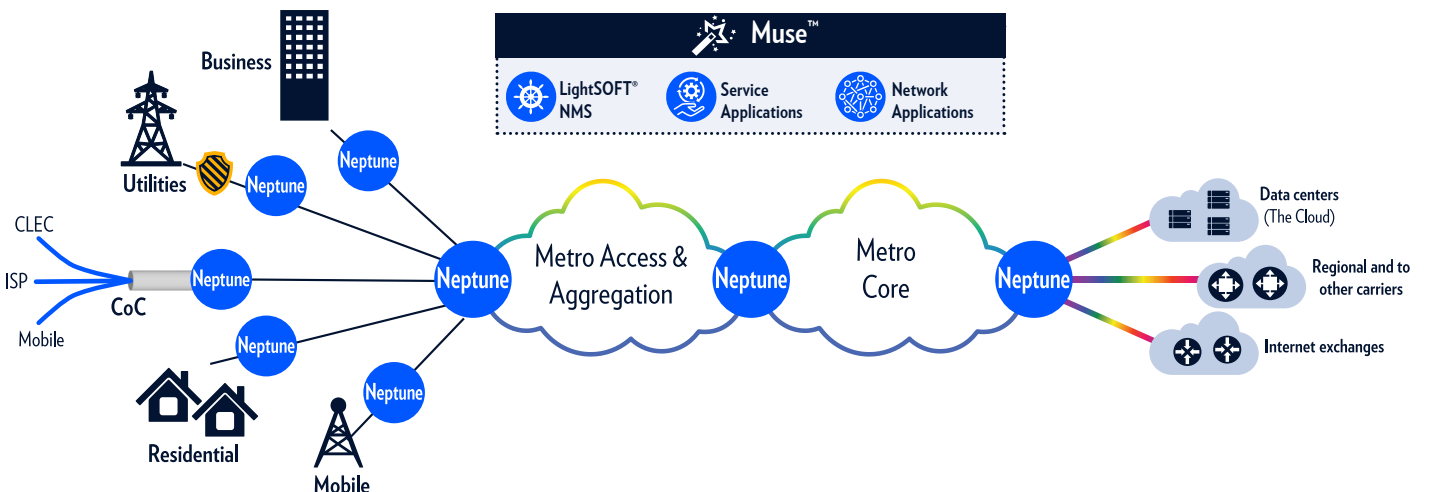

NPT-1010D is an extremely compact packet transport edge device. A member of ECI's Neptune (NPT) product line, NPT-1010D is optimized for remote locations with strict environmental and size requirements. NPT-1010D is a hardened DIN-rail switch, supporting Ethernet and MPLS-TP with up to 5 Gbps switching capacity. The Neptune product line streamlines end-to-end metro service delivery by combining carrier-grade service assurance, visibility, and control with packet efficiency and multiservice support. Neptune offers a powerful, flexible, and efficient end-to-end metro solution for high-performance services. It achieves this by convergence of Ethernet (MEF CE2.0 certified), MPLS-TP, OTN, and WDM. Neptune also provides NFV services and SDN applications, which are compulsory in today's challenging metro environment.

With such a rich and robust feature set, NPT-1010D is well suited for a wide variety of applications and networking scenarios. These include a gateway for mission-critical services, wholesale service delivery, and business VPN connectivity services. As with all of ECI's transport products, NPT-1010D is managed by ECI's Muse™ software suite.
