

ECI Named a Finalist for The Network Transformation Awards and The Global Telecoms Awards

The achievements note ECI's advances in Cloud Infrastructure and Telecoms Transformation

PETACH TIKVA, Israel – October 10, 2018 – [ECI](#), a global provider of ELASTIC Network® solutions for service providers, critical infrastructures and data center operators, today announced that it has been named a finalist in the 2018 Network Transformation Awards for its Muse™ Software Suite, and The Global Telecoms Awards (GloTel) for its ELASTIC Services Platform.

2018 Network Transformation Awards

ECI's Muse™ software suite earned it recognition as one of the finalists in the “Best New Cloud Infrastructure” category of the Network Transformation Awards (NetTA) for its modular, cloud native software suite. Muse is a cloud-native solution designed to support existing and future network infrastructure, leveraging automation and real-time programmatic control to streamline key components of the service and network lifecycles, including service creation, planning, provisioning and analytics.

Now in its second year, NetTA, organized by [Layer123](#) and held in conjunction with the [SDN NFV World Congress](#), recognizes the achievements of companies “advancing the industry to the next generation of networks.” Winners will be announced at the Network Transformation Awards gala and dinner in The Hague during SDN NFV World Congress on October 10, 2018. ECI was shortlisted in multiple categories for previous NetTA awards.

The 2018 Global Telecoms Awards

ECI is also one of the finalists for the upcoming 2018 GLOTEL awards for its achievements in telecom transformation with its ELASTIC Services Platform that allows service providers to concentrate on launching new services and driving new revenue streams. The ELASTIC Services Platform empowers carriers to do more, through simple service creation and lifecycle management, proactive network assurance, network optimization and automation.

This is the second time ECI has been shortlisted for a GLOTEL award, which recognizes the innovations of companies “involved in advancing and transforming today's telecoms industry.” Winners will be announced at a gala and dinner on November 8, 2018 in London at the London Montcalm Marble Arch. More information on the award categories and shortlists can be found [here](#).

“ECI has done some extremely noteworthy and industry-advancing things this year, and these awards are a testament to the hard work from our team,” said Jimmy Mizrahi, head of global portfolio of ECI. “We are honored to be among a shortlist of leading telecom companies around the world for both the NetTA and GLOTEL awards. Being named a finalist for our work and achievements in transforming the telecom space are evidence of our innovation and dedication to provide customers with the very best

solutions across the scope of the telecoms industry. We look forward to attending the awards' ceremonies later this year and celebrating our industry.”

Earlier this year, ECI won the “Best Multi-layer SDN Controller” award during Next Generation Optical Networking (NGON) and Optical DCI 2018, the world's leading optical networks event. ECI also won the “Optical Subsystems Category” of the Lightwave Innovation Reviews Program in Q1 this year. In fact, virtually all of ECI’s product families and solutions have been recognized multiple times in a variety of industry awards over the last couple of years.
